

Approved by the Board of SwissDRG AG on 12 March 2021
Including costs of system use (CSU)
As of: 29 November 2022

PCG catalogue

TARPSY Version 4.0/2022,2023

Explanatory notes:

The PCG catalogue shows cost weights per day. In order to calculate the effective cost weight, the length of stay must be multiplied by the daily cost weight. The various phases of a PCG are of no relevance for the purposes of calculating the effective cost weight.

On top of a TARPSY flat rate, additional fees may also be billed. These can be found

- in the TARPSY additional fee catalogue that applies in the billing year

and

- in Annex 2 (weighted additional fees) and Annex 3 (unweighted additional fees) to the billing version of the SwissDRG flat rate per case catalogue that applies in the billing year.

The 'billing restrictions' need to be taken into account. In addition, an additional fee can only be billed if the respective CHOP/ATC code is incorporated into the coding for the case in accordance with the coding guidelines that apply in the billing year and all the conditions for coding in accordance with the CHOP catalogue that applies in the billing year are satisfied.

Legend

The phase in which a cost weight applies can be seen from the colour of the field.

Phase 1
Phase 2
Phase 3

TP21 Mental or behavioural disorders associated with alcohol, other drugs or other substances

TP21A Mental or behavioural disorders associated with alcohol, other drugs, or other substances, age < 18 years, or age > 65 years with a specific secondary diagnosis, or complicating diagnosis or specific treatment
